`rinoh.frontend.sphinx` is a Sphinx extension module. It provides a Sphinx builder with the name *rinoh*. The builder recognizes the following `conf.py` options. Of these, only `rinoh_documents` (or `latex_documents`) is required.

## **rinoh\_documents**

Determines which PDF documents to build. Its format is a list of dictionaries, one for each document to be generated. The supported keys for these dictionaries are listed below. Two of them are required:

### **doc (required)**

String that specifies the name of the master document (typically `index`).

### **target (required)**

The name of the target PDF file without the extension.

The following keys allow overriding the content included on the document's title page and page headers/footers (depending on the template and its configuration). The values for text content can be plain text or `StyledText`.

### **logo (no default)**

Path (absolute or relative to the location of the `conf.py` file) to an image file, typically included on the title page.

### **title (default: "project documentation")**

The title of the document.

### **subtitle (default: "Release release")**

Subtitle of the document.

### **author (default: "author")**

The document's author.

### **date (default: determined from today and today\_fmt)**

The document (build) date.

The remaining keys control what is included in the document and the document template (configuration) to use.

### **toctree\_only (default: False)**

Must be `True` or `False`. If `true`, the document itself is not included in the output, only the documents referenced by it via TOC trees.

### **domain\_indices (default: True)**

If `true`, generate domain-specific indices in addition to the general index. It is equivalent to the `html_domain_indices` and `latex_domain_indices` configuration variables.

### **template (default: Book)**

Determines the template used to render the document. It takes:

- the filename of a template configuration file,
- a `TemplateConfiguration` instance,

- the name of an installed template (see `rinoh --list-templates`), or
- a `DocumentTemplate` subclass

`rinoh_documents` will also accept other keys than those listed above. These items will be available as document metadata and can be used in a custom document template.

Example:

```
rinoh_documents = [
    dict(doc='index', target='manual', toctree_only=False,
         template='manual.rtt', logo='logo.pdf'),
    dict(doc='ref', target='reference', title='Reference Manual',
         template='reference.rtt', stamp='DRAFT'),
]
```

### `rinoh_targets`

Limits rendering to the specified set of targets. This variable accepts either a list of strings or a string containing comma-separated values. The target names should match those set in `rinoh_documents`.

To render only the ‘manual’ target, you can set the following in `conf.py`:

```
rinoh_targets = ['manual']
```

The same can be achieved from the command line using the by using the string form with `sphinx-build -D`:

```
sphinx-build -b rinoh -D rinoh_targets="manual" source build
```

## 2.1 Legacy Configuration Variables

The configuration variables below are no longer supported. Instead, their functionality can now be configured per document in `rinoh_documents`.

### `rinoh_template`

This configuration variable is **no longer supported** since the document template can be specified in `rinoh_documents` entries.

### `rinoh_stylesheet`

This configuration variable is **no longer supported** since it is not obvious which style sheet will be used when the template configuration also specifies a style sheet. Please specify the style sheet to use in your template configuration file:

```
[TEMPLATE_CONFIGURATION]
name = My Book
template = book
stylesheet = my_stylesheet.rts
```

### `rinoh_paper_size`

This configuration variable is **no longer supported** since it was not obvious which paper size was being used when the template configuration (`rinoh_template`) also specified a paper size. Please specify the `paper_size` to use in your template configuration file:

```
[TEMPLATE_CONFIGURATION]
name = My Book
template = book

[VARIABLES]
```

```
paper_size = A5
```

#### **rinoh\_logo**

This configuration variable is **no longer supported** since the logo can be specified in the `rinoh_documents` entries.

#### **rinoh\_domain\_indices**

This configuration variable is **no longer supported** since the domain\_indices can be specified in the `rinoh_documents` entries.

#### **rinoh\_metadata**

This configuration variable is **no longer supported**. Metadata entries can now be added to `rinoh_documents` entries.

## 3.1 Included Style Sheets

These style sheets are included with rinohtype:

`rinohtype.stylesheets.sphinx`

Mostly a copy of the LaTeX style included with Sphinx

Entry point name: `sphinx`

`rinohtype.stylesheets.sphinx_article`

The Sphinx stylesheet adjusted for the article template

Entry point name: `sphinx_article`

`rinohtype.stylesheets.sphinx_base14`

The Sphinx stylesheet, but using the fonts from the PDF core set (yielding smaller PDF files)

Entry point name: `sphinx_base14`

Additional style sheets can be installed from PyPI. The installed style sheets can be listed using `rinohtype --list-stylesheets`.

## 3.2 Default Matcher

The default matcher provides the selectors for the styles used in the standard style sheets.

`rinohtype.stylesheets.matcher`

The default matcher defines the following styles

## 5.3 Dimension (`rinoh.dimension`)

Classes for expressing dimensions: lengths, widths, line thickness, etc.

Each dimension is expressed in terms of a unit. Several common units are defined here as constants. To create a new dimension, multiply number with a unit:

```
height = 100*PT
width = 50*PERCENT
```

Fractional dimensions are evaluated within the context they are defined in. For example, the width of a `Flowable` is evaluated with respect to the total width available to it.

**class** `rinoh.dimension.Dimension` ( *value=0, unit=None* )

A simple dimension

Parameters

- **value** (*int or float*) – the magnitude of the dimension
- **unit** (*DimensionUnit*) – the unit this dimension is expressed in. Default: `PT`.

**grow** ( *value* )

Grow this dimension (in-place)

The `value` is interpreted as a magnitude expressed in the same unit as this dimension.

Parameters

**value** (*int or float*) – the amount to add to the magnitude of this dimension

Returns

*Dimension* – this (growable) dimension itself

```
rinoh.dimension.PT = DimensionUnit(1.0, 'pt')
```

### 5.4.1 Pages

```
class rinoh.document.Page ( document_part, number, paper, orientation='portrait',

```

class rinoh.flowable.Flowable ( align=None, width=None, id=None, style=None,
parent=None, source=None )
    A document element that can be “flowed” into a container on the page.
    A flowable can adapt to the width of the container, or it can horizontally align itself in
    the container.

    Parameters
    • align (HorizontalAlignment) – horizontal alignment of the flowable
    • width (FlowableWidth or DimensionBase) – the width of the flowable.

class rinoh.flowable.FlowableState ( flowable, _initial=True )
    Stores a flowable’s rendering state, which can be copied.
    This enables saving the rendering state at certain points in the rendering process, so
    rendering can later be resumed at those points, if needed.

```

### 5.6.1 No-Output Flowables

These flowables do not directly place anything on the page. All except `DummyFlowable` do have side-effects however. Some of these side-effects affect the rendering of the document in an indirect way.

```

class rinoh.flowable.DummyFlowable ( id=None, parent=None )
    A flowable that does not directly place anything on the page.
    Subclasses can produce side-effects to affect the output in another way.

class rinoh.flowable.AnchorFlowable ( id=None, parent=None )
    A dummy flowable that registers a destination anchor.
    Places a destination for the flowable’s ID at the current cursor position.

class rinoh.flowable.SetMetadataFlowable ( parent=None, **metadata )
    A dummy flowable that stores metadata in the document.
    The metadata is passed as keyword arguments. It will be available to other flowables
    during the rendering stage.

class rinoh.flowable.WarnFlowable ( message, parent=None )
    A dummy flowable that emits a warning during the rendering stage.

    Parameters
    • message (str) – the warning message to emit

```

```

```

### 5.6.2 Labeled Flowables

```
class rinoh.flowable.LabeledFlowable ( label, flowable, id=None, style=None, parent=None )
```

A flowable with a label.

The flowable and the label are rendered side-by-side. If the label exceeds the *label\_max\_width* style attribute value, the flowable is rendered below the label.

Parameters

- **label** (*Flowable*) – the label for the flowable
- **flowable** (*Flowable*) – the flowable to label

**style\_class**

alias of *LabeledFlowableStyle*

**prepare** ( *flowable\_target* )

**render** ( *container*, *last\_descender*, *state*, *label\_column\_width=None*, *space\_below=0*, *\*\*kwargs* )

Renders the flowable's content to *container*, with the flowable's top edge lining up with the container's cursor. *descender* is the descender height of the preceding line or *None*.

```
class rinoh.flowable.LabeledFlowableState ( flowable, content_flowable_state, _initial=True )
```

### 5.6.3 Grouping Flowables

```
class rinoh.flowable.GroupedFlowables ( align=None, width=None, id=None, style=None, parent=None, source=None )
```

Groups a list of flowables and renders them one below the other.

Makes sure that a flowable for which *keep\_with\_next* is enabled is not separated from the flowable that follows it.

Subclasses should implement *flowables()*.

**style\_class**

alias of *GroupedFlowablesStyle*

**flowables** ( *container* )

Generator yielding the *Flowables* to group

**render** ( *container*, *descender*, *state*, *first\_line\_only=False*, *\*\*kwargs* )

```
class rinoh.flowable.GroupedFlowablesState ( groupedflowables, flowables, first_flowable_state=None, _initial=True, _index=0 )
```

#### 5.6.4 Floating Flowables

**class** `rinoh.flowable.Float` ( *align=None, width=None, id=None, style=None, parent=None, source=None* )

A flowable that can optionally be placed elsewhere on the page.

If this flowable's *float* style attribute is set to `True`, it is not flowed in line with the surrounding flowables, but it is instead flowed into another container pointed to by the former's `Container.float_space` attribute.

This is typically used to place figures and tables at the top or bottom of a page, instead of in between paragraphs.

**style\_class**

alias of `FloatStyle`

**flow** ( *container, last\_descender, state=None, \*\*kwargs* )

Flow this flowable into *container* and return the vertical space consumed.

The flowable's contents are preceded by a vertical space with a height as specified in its style's *space\_above* attribute. Similarly, the flowed content is followed by a vertical space with a height given by the *space\_below* style attribute.

Text to prepend to the label

Accepts *StyledText*: a list of styled text strings, separated by spaces. A styled text string is a quoted string (' or "), optionally followed by a style name enclosed in braces: 'text string' (style name)

Default: (no value)

**label\_suffix**

Text to append to the label
