`rinoh.frontend.sphinx` is a Sphinx extension module. It provides a Sphinx builder with the name *rinoh*. The builder recognizes the following `conf.py` options. Of these, only `rinoh_documents` (or `latex_documents`) is required.

rinoh_documents

Determines which PDF documents to build. Its format is a list of dictionaries, one for each document to be generated. The supported keys for these dictionaries are listed below. Two of them are required:

doc (required)

String that specifies the name of the master document (typically `index`).

target (required)

The name of the target PDF file without the extension.

The following keys allow overriding the content included on the document's title page and page headers/footers (depending on the template and its configuration). The values for text content can be plain text or `StyledText`.

logo (no default)

Path (absolute or relative to the location of the `conf.py` file) to an image file, typically included on the title page.

title (default: "project documentation")

The title of the document.

subtitle (default: "Release release")

Subtitle of the document.

author (default: "author")

The document's author.

date (default: determined from today and today_fmt)

The document (build) date.

The remaining keys control what is included in the document and the document template (configuration) to use.

toctree_only (default: False)

Must be `True` or `False`. If `true`, the document itself is not included in the output, only the documents referenced by it via TOC trees.

domain_indices (default: True)

If `true`, generate domain-specific indices in addition to the general index. It is equivalent to the `html_domain_indices` and `latex_domain_indices` configuration variables.

template (default: Book)

Determines the template used to render the document. It takes:

- the filename of a template configuration file,
- a `TemplateConfiguration` instance,

- the name of an installed template (see `rinoh --list-templates`), or
- a `DocumentTemplate` subclass

`rinoh_documents` will also accept other keys than those listed above. These items will be available as document metadata and can be used in a custom document template.

Example:

```
rinoh_documents = [
    dict(doc='index', target='manual', toctree_only=False,
          template='manual.rtt', logo='logo.pdf'),
    dict(doc='ref', target='reference', title='Reference Manual',
          template='reference.rtt', stamp='DRAFT'),
]
```

`rinoh_targets`

Limits rendering to the specified set of targets. This variable accepts either a list of strings or a string containing comma-separated values. The target names should match those set in `rinoh_documents`.

To render only the ‘manual’ target, you can set the following in `conf.py`:

```
rinoh_targets = ['manual']
```

The same can be achieved from the command line using the by using the string form with `sphinx-build -D`:

```
sphinx-build -b rinoh -D rinoh_targets="manual" source build
```

2.1 Legacy Configuration Variables

The configuration variables below are no longer supported. Instead, their functionality can now be configured per document in `rinoh_documents`.

`rinoh_template`

This configuration variable is **no longer supported** since the document template can be specified in `rinoh_documents` entries.

`rinoh_stylesheet`

This configuration variable is **no longer supported** since it is not obvious which style sheet will be used when the template configuration also specifies a style sheet. Please specify the style sheet to use in your template configuration file:

```
[TEMPLATE_CONFIGURATION]
name = My Book
template = book
stylesheet = my_stylesheet.rts
```

`rinoh_paper_size`

This configuration variable is **no longer supported** since it was not obvious which paper size was being used when the template configuration (`rinoh_template`) also specified a paper size. Please specify the `paper_size` to use in your template configuration file:

```
[TEMPLATE_CONFIGURATION]
name = My Book
template = book

[VARIABLES]
```

```
paper_size = A5
```

rinoh_logo

This configuration variable is **no longer supported** since the logo can be specified in the `rinoh_documents` entries.

rinoh_domain_indices

This configuration variable is **no longer supported** since the `domain_indices` can be specified in the `rinoh_documents` entries.

rinoh_metadata

This configuration variable is **no longer supported**. Metadata entries can now be added to `rinoh_documents` entries.

3.1 Included Style Sheets

These style sheets are included with rinohtype:

`rinohtype.stylesheets.sphinx`

Mostly a copy of the LaTeX style included with Sphinx

Entry point name: `sphinx`

`rinohtype.stylesheets.sphinx_article`

The Sphinx stylesheet adjusted for the article template

Entry point name: `sphinx_article`

`rinohtype.stylesheets.sphinx_base14`

The Sphinx stylesheet, but using the fonts from the PDF core set (yielding smaller PDF files)

Entry point name: `sphinx_base14`

Additional style sheets can be installed from PyPI. The installed style sheets can be listed using `rinohtype --list-stylesheets`.

3.2 Default Matcher

The default matcher provides the selectors for the styles used in the standard style sheets.

`rinohtype.stylesheets.matcher`

The default matcher defines the following styles

- title page rule: `HorizontalRuleStyle`
- title page logo: `FlowableStyle`
- title page title: `ParagraphStyle`
- title page subtitle: `ParagraphStyle`
- title page author: `ParagraphStyle`
- title page date: `ParagraphStyle`
- title page extra: `ParagraphStyle`
- front matter section title: `ParagraphStyle`
- body matter chapter label: `ParagraphStyle`
- body matter chapter number: `TextStyle`
- body matter chapter title: `ParagraphStyle`
- fallback: `TextStyle`
- italic: `TextStyle`

```
height = 100*PT
width = 50*PERCENT
```

Fractional dimensions are evaluated within the context they are defined in. For example, the width of a `Flowable` is evaluated with respect to the total width available to it.

Parameters

- **value** (*int or float*) – the magnitude of the dimension
- **unit** (*DimensionUnit*) – the unit this dimension is expressed in. Default: `PT`.

5.4.1 Pages

```

    A document element that can be “flowed” into a container on the page.
    A flowable can adapt to the width of the container, or it can horizontally align itself in
    the container.

    Parameters
        • align (HorizontalAlignment) – horizontal alignment of the flowable
        • width (FlowableWidth or DimensionBase) – the width of the flowable.

class rinoh.flowable.FlowableState ( flowable, _initial=True )
    Stores a flowable’s rendering state, which can be copied.

    rendering can later be resumed at those points, if needed.

```

5.6.1 No-Output Flowables

These flowables do not directly place anything on the page. All except `DummyFlowable` do have side-effects however. Some of these side-effects affect the rendering of the document in an indirect way.

    Places a destination for the flowable’s ID at the current cursor position.

class rinoh.flowable.SetMetadataFlowable ( parent=None, **metadata )
    A dummy flowable that stores metadata in the document.
    The metadata is passed as keyword arguments. It will be available to other flowables
    during the rendering stage.

class rinoh.flowable.WarnFlowable ( message, parent=None )
    A dummy flowable that emits a warning during the rendering stage.

```
class rinoh.flowable.LabeledFlowable ( label, flowable, id=None, style=None, parent=None )
```

A flowable with a label.

The flowable and the label are rendered side-by-side. If the label exceeds the *label_max_width* style attribute value, the flowable is rendered below the label.

Parameters

- **flowable** (*Flowable*) – the flowable to label

style_class

alias of `rinoh.flowable.LabeledFlowableStyle`

5.6.4 Floating Flowables

class `rinoh.flowable.Float` (*align=None, width=None, id=None, style=None, parent=None, source=None*)

A flowable that can optionally be placed elsewhere on the page.

If this flowable's *float* style attribute is set to `True`, it is not flowed in line with the surrounding flowables, but it is instead flowed into another container pointed to by the former's `Container.float_space` attribute.

This is typically used to place figures and tables at the top or bottom of a page, instead of in between paragraphs.

style_class

flow (*container, last_descender, state=None, **kwargs*)

Flow this flowable into *container* and return the vertical space consumed.

The flowable's contents are preceded by a vertical space with a height as specified in its style's *space_above* attribute. Similarly, the flowed content is followed by a vertical space with a height given by the *space_below* style attribute.

- **weight** (*FontWeight*) – weight of the font
- **slant** (*FontSlant*) – slant of the font

get_glyph_metrics (*char, variant*)

Return the glyph metrics for a particular character

If the glyph of requested font variant is not present in the font, the *normal* variant is returned instead. If that is not present either, an exception is raised.

- **successor_glyph** (*GlyphMetrics*) – the second of the glyphs to combine

Returns

GlyphMetrics or `None` – the ligature to replace the given glyphs

fonts (*)*

Generator yielding all fonts of this typeface

Yields

Font – the next font in this typeface

get_font (*weight*=400, *slant*='upright', *width*=5)

Unlike other string collections, these are not limited to a predefined set.

Attributes:

class `rinoh.strings.Strings` (**string_collections*)

Stores several `StringCollections`

class `rinoh.strings.StringField` (*strings_class, key, style=None, parent=None, source=None*)

The displayed string is either the localized string as determined by the language set for the document or the user-supplied string passed to the `TemplateConfiguration`.

5.17 Style (`rinoh.style`)

class `rinoh.style.Styled` (*id=None, style=None, parent=None, source=None*)

A document element who's style can be configured.

Parameters

style (*str, Style*) – the style to associate with this element. If *style* is a string, the corresponding style is lookup up in the document's style sheet by means of selectors.
